1. What type of information is it? Do you have different types of information to give you a comprehensive understanding of the subject?

The **information timeline** is one way to describe how information is produced, distributed and how it changes over time.

Knowing how information and our understanding of events changes over time can help you find the information you need. **In general, but certainly not always, the reliability of information about a particular event improves with time.** The reality is not so neat and tidy. However, over time, we tend to have a more comprehensive overview of the event.

## b. Scholarly and other types of articles

# SCHOLARLY AND OTHER TYPES OF ARTICLES

**Reading a scholarly, peer-reviewed article is like joining a very long, sometimes ancient and ongoing conversation.**

Scholarly articles are generally written by experts in their field with academic training (often graduate students and professors at universities). Peer-review is a process whereby written work is sent to fellow scholars in the same field to ensure standards and quality of original research work before publication. Follow this link for more information about peer-review.

Unlike other articles, scholarly articles always include citations (in-text, footnotes or endnotes) and a list of works cited. Rather than represent one person's opinion, scholarly articles tend to acknowledge the much wider conversation, across space and time, in which their research has taken place.

### Looking for scholarly peer-reviewed articles?

- Use the chart below to better identify scholarly publications.
- To learn more about the typical parts of a scholarly journal article, check out Andreas Orphanides' [Anatomy of a Scholarly Article](#).
- When searching databases for peer-reviewed articles specifically, **add filters to limit your search to peer-reviewed articles only.**
- Watch this short clip [What are Scholarly Sources?](#) From Ryerson University Library & Archives to learn more about the differences between scholarly and non-scholarly articles.

i. Scholarly vs Trade vs Popular publications

## Scholarly vs Trade vs Popular publications

Characteristics	 <b>Scholarly</b>	 <b>Trade</b>	 <b>Popular</b>
<b>Author</b>	Named expert.	Industry representative, not always named.	Journalist or non-professional, not always named.
<b>Audience</b>	Scholars or researchers.	People in the industry.	General public.
<b>Content</b>	Original, mostly peer-reviewed, in-depth research, lengthy, using technical or subject-specific language.	Reporting industry/trade trends, best practices, products and news. Often uses technical language.	Reporting current events, opinions and general information. Variety of writing for different education levels, but generally does not require special knowledge or background.
<b>Appearance</b>	Plain, some images and mostly text with data illustrated by graphs, charts and figures.	Often glossy with many colour images.	Glossy with many colour images.
<b>Frequency</b>	Usually bi-monthly or quarterly.	Usually weekly or monthly.	Usually weekly or monthly.

## ABOUT PEER REVIEW

**Peer review** refers to a process of review by the author's professional peers (scholars or experts in their field).

There are a few different types of peer review processes including:

- *blind peer review* whereby an article is sent to external reviewer outside of publishing/sponsoring organization and the author's identity or the reviewer's identity is unknown;
- *editorial board peer review* (review by internal board of editors);
- *expert peer review* (internal or external experts, author's identity may be known or unknown); and
- *open peer review* (disclosure of peer author and reviewer identities and more transparent and participatory process).

The words "academic" and "scholarly" are often used interchangeably and are usually used to describe peer-reviewed articles. Some databases however for example ArtSource (EBSCO) differentiate between "academic" (may or may not be peer-reviewed) and "scholarly" (MUST be peer-reviewed) articles.

In addition to the hundreds of journals available online through our E-Resources, here are a few peer-reviewed journals available in print in the library's Reading Room: Art Bulletin, Art Journal, Design Issues Journal, Journal of Modern Craft, and October, RACAR, and TOPIA.

c. Primary, secondary and tertiary sources

## PRIMARY, SECONDARY AND TERTIARY SOURCES

Sources of information may be divided into three types: primary, secondary and tertiary.

<b>Primary</b>	<b>1<sup>st</sup> hand accounts: information or artifacts created at the time being researched</b> <ul style="list-style-type: none"><li>• Direct evidence of an event including: historical or legal documents, artifacts, diaries, emails, speeches, art works, photographs, interviews, surveys, data and lab notes, conference proceedings</li></ul>
<b>Secondary</b>	<b>2<sup>nd</sup> hand accounts: analysis or interpretation of an event, time period, artifact or phenomenon</b> <ul style="list-style-type: none"><li>• Second-hand account of an event, analysis or interpretation of primary source including: biographies, literary and art criticism, exhibition reviews, magazine and academic journal articles, monographs (NOT fiction or autobiography),</li></ul>
<b>Tertiary</b>	<b>3<sup>rd</sup> (or 30<sup>th</sup>) hand account: synthesis of information from well-established primary and secondary sources</b> <ul style="list-style-type: none"><li>• Bibliographies, dictionaries, encyclopedias, guidebooks, directories, manuals</li></ul>

## 1. ACT UP and evaluate your sources critically!

There are lots of way to help you remember **what questions to ask yourself when evaluating resources** (e.g. who, what, where, when, why, how?; is it CRAAP? currency, relevance, authority, accuracy, purpose). Dawn Stahura, librarian at Simmons College, thought of the acronym **ACT UP** to challenge ideas about what authoritative sources are:

- A = Author:** Who wrote the publication? Who are they? What is their background?
- C = Currency:** When was the resource published? Was it published recently? How well does it fit with your research interest(s)?
- T = Truth:** How accurate is this information? Can you verify any of the claims in other sources? Are there typos and spelling mistakes?
- U = Unbiased:** Is the information presented to sway the audience to a particular point of view? How is the author funded?
- P = Privilege:** Think about the privilege of the author, editors, etc. What voices are represented, which ones are not?

Stahura, Dawn. "ACT UP for evaluating sources: Pushing against privilege." *College & Research Libraries News* [Online], 79.10 (2018): 551. Accessed 28 Sep. 2020

2. Is it fake news? From “true” to “pants on fire”, how to spot fake news.

**Fake news is not news at all, but fictional content deliberately disguised as fact and created for the purpose to mislead and misinform.**

# HOW TO SPOT FAKE NEWS

**CONSIDER THE SOURCE**  
Click away from the story to investigate the site, its mission and its contact info.

**READ BEYOND**  
Headlines can be outrageous in an effort to get clicks. What’s the whole story?

**CHECK THE AUTHOR**  
Do a quick search on the author. Are they credible? Are they real?

**SUPPORTING SOURCES?**  
Click on those links. Determine if the info given actually supports the story.

**CHECK THE DATE**  
Reposting old news stories doesn’t mean they’re relevant to current events.

**IS IT A JOKE?**  
If it is too outlandish, it might be satire. Research the site and author to be sure.

**CHECK YOUR BIASES**  
Consider if your own beliefs could affect your judgement.

**ASK THE EXPERTS**  
Ask a librarian, or consult a fact-checking site.

**IFLA**

### 3. Information literacy and critical thinking in the post-truth era.

In 2016, Oxford Dictionaries announced “post-truth” as its 2016 [Word of the Year](#). Learn how to be more information literate and think critically in the post-truth era. Browse **LinkedIn Learning** in myApps (or [Library E-Resources](#)) and check out course on Information Literacy designed taught by Elsa Loftis, director of library services at the former Oregon College of Art and Craft.

The screenshot displays the LinkedIn Learning interface. At the top, there is a search bar containing the text "information literacy". To the right of the search bar are navigation icons for Home, My Learning, Me, and EN, along with a red "AU" logo. Below the search bar is a dark sidebar menu with a "Contents" section. The menu items are: Introduction (with a dropdown arrow), Welcome (1m 2s, with a checkmark and bookmark icon), What is information literacy? (1m 47s, with a checkmark and bookmark icon), 1. Types of Resources (with a right arrow), 2. Search Strategies (with a right arrow), 3. Resource Evaluation (with a right arrow), 4. Ethical Use of Information (with a right arrow), 5. Citation (with a right arrow), 6. Information Literacy for Art and Design (with a right arrow), and Conclusion (with a right arrow). The main content area features a video player showing Elsa Loftis, the instructor, standing in a room with framed pictures on the wall. Below the video player is a navigation bar with tabs for Overview (selected), Q&A, Notebook, and Transcript. At the bottom, there are two sections: "INSTRUCTOR" featuring Elsa Loftis, Director of Library Services at Oregon College of Art and Craft, and "RELATED TO THIS COURSE" featuring a "Certificates" link and a "Show all" link.
